STILLE - Surgical Perfection

STILLE is one of the oldest medical device companies in the world. We develop, manufacture and sell proprietary high-quality surgical instruments and specialty tables to leading surgeons worldwide. We have done so for more than 170 years.

STILLE's offering consists of a strong brand and products renowned for their superior quality. We manage our business in two distinct business areas - Surgery and Patient Positioning.

STILLE surgical instruments are considered state of the art by many surgeons around the world. All STILLE instruments are handcrafted as an art by highly skilled instrument makers in Eskilstuna, Sweden.

The slender design and excellent balance are the characteristics which make the STILLE Instruments easily recognizable. Their highly polished surface and delicate design make STILLE instruments lighter and easier to keep clean, thus more durable against discoloration and corrosion. All this provides STILLE instruments with a unique and outstanding feeling.
The obvious choice for demanding orthopedic surgery

STILLE is proud to offer an extensive and strong line of instruments for orthopedic surgery. The range includes everything from bone rongeurs, osteotomes, retractors, bone curettes and raspatories to mallets. Still today, we are very proud to have developed the world’s first bone rongeur with double-action joint already in 1872. We also invented the classic osteotome with the 8-shaped handle. Both have been copied many times, but the original is always better than a copy.

Scissors

“Scissors Please!” Surgeons worldwide prefer scissors from STILLE. They are light and well-balanced with a smooth, soft feel that follows every movement so that the scissors become a natural extension of the hand. The scissors’ design provides a firm grip with maximum cutting power for all types of soft tissue. Regardless of the model they are perfectly precise – all the way to the tip.

Bone cutters and rongeurs

STILLE DOUBLE-ACTION BONE RONGEURS allow the surgeon to gently and smoothly cut bone with one hand. STILLE invented this double-action solution as early as 1872 and since then, both our bone cutters and rongeurs have been widely imitated. But the original is always better than the imitation, and are perceived by many surgeons as more graceful and easier to use than any other brand.

Needle holders

A PERFECT RESULT WHEN SUTURING requires a reliable and durable instrument. STILLE needle holders are easily recognized by their delicate and soft design, which helps the surgeon to hold the needle very securely. The golden finger loops indicate that the jaws are fitted with inserts of hard metal, which prolongs the life of the instrument. Some needle holders are instead coated with Diamond Jaws where hard metal is sprayed on as a thin layer on the inside of the jaws.

Bone instruments

OSTEOTOMES, CHISELS, MALLETs and other bone instruments from STILLE are made of high quality hardened steel, with particularly high strength to avoid breakage or bending. The hardness increases resistance to wear and the toughness of the steel determines how well the instrument can withstand great strain for long periods of time.

Forceps

AS AN EXTENSION OF THE SURGEON’S THUMB and forefinger, forceps need to grasp and release with the same sensitivity as a pair of fingertips. The teeth on surgical forceps are specially designed to make a firm, yet gentle, grasp of the tissue. The anatomical dressing forceps are designed as much as possible, to take an atraumatic grip on sensitive tissue.

Other STILLE products

STILLE offers even more high quality products for orthopedics, such as plaster cast removers, Gigli wire saws, bone needles and staples (not for US-market) and Tourniquet equipment (not for US-market). Welcome to contact us for more information, or please visit us on www.stille.se
