

STILLE Innovation
Realizing your surgical innovation

Surgical perfection. For Life.

Stille Innovation. For Life.

Introducing the new Stille Innovation initiative.

Stille Innovation offers a unique process for realization and commercialization of your surgical instrument ideas. Stille has over 170 years of experience in developing surgical tools in collaboration with leading clinicians. Who is better to help design, produce, approve and commercialize your new ideas?

Stille's instruments are handcrafted as an art in Eskilstuna, Sweden. The instrument makers master the forging of Stille's specialized surgical steel, thus the creation of nearly any type of custom made product. Instruments are sold through a direct sales force and distributors covering more than 50 countries in the world.

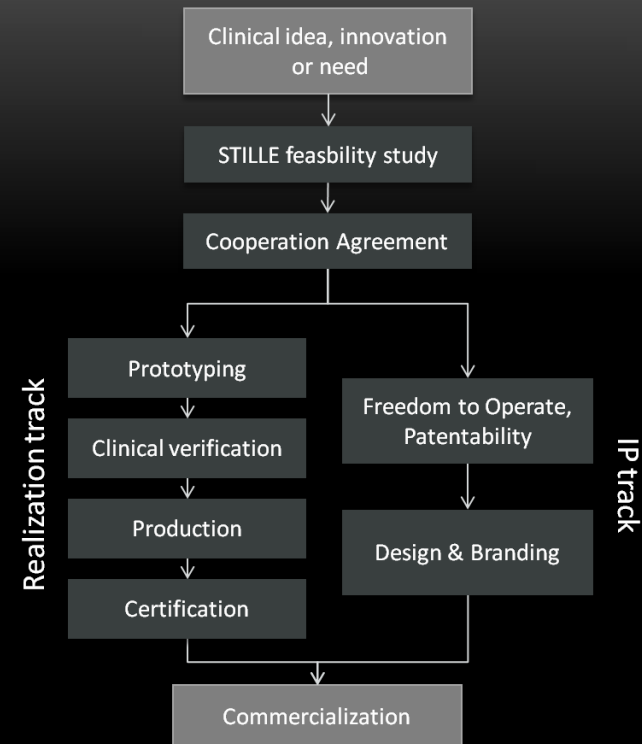

The Stille Innovation process

Stille Innovation enables clinicians to commercialize their ideas in an efficient manner. With a proven and defined process, Stille can help to develop, produce and market ideas cost-efficiently.

IP and design can be supported through Stille's partner Bergenstråhle Lindvall, a leading Swedish IP-law firm with extensive med-tech experience.
