The slender design and excellent balance are the characteristics which make the Stille Instruments easily recognizable. Their highly polished surface and delicate design make Stille instruments lighter and easier to keep clean, thus more durable against discoloration and corrosion. All this provides Stille instruments with a unique and outstanding feeling.

Stille Needle Holders for Plastic Surgery

Surgical precision in every suture

Surgical Perfection. For life.

A perfect suture. Every time

Stille needle holders are easily recognized by their delicate and soft design. Once you try them, you will know the difference.

A perfect result when suturing requires a reliable and durable instrument. Stille needle holders are easily recognized by their delicate and soft design, which helps the plastic surgeon to hold the needle very securely. The golden finger loops indicate that the jaws are fitted with inserts of hard metal, which prolongs the life of the instrument. Some needle holders are instead coated with Diamond Jaws where hard metal is sprayed on as a thin layer on the inside of the jaws.

Another feature of Stille's needle holders is the open box lock. This reduces the risk of the needle holder being caught in the sutures or the surgeon's gloves. It also simplifies the cleaning and sterilization process. The ratchet's unique design ensures that the instrument stays closed in a safe position while remaining easy to open. All of these features are characteristic of that special feel that instruments from Stille provide.

For precise matching of sutures and needle holders, see the separate guide for matching suture size to individual needle holders.
