The world's best instruments, for the world's best surgeons

For more than 180 years, we have developed and manufactured the best surgical instruments for the world's most demanding surgeons. We would like to extend a sincere thank you to all our current customers and welcome our future customers to experience the STILLE difference. In this catalog we present a selection of STILLE original surgical instruments.

Precision, durability and feel are characteristic qualities of all STILLE instruments. The majority are handcrafted by our highly skilled artisans in Eskilstuna, Sweden. Our instrument manufacturing process from melting steel rods to finished product is a long one, involving multiple stages of development. Our method of crafting STILLE instruments involves only the highest-grade steel, which provides a unique feel and reliability to the surgeon in any surgical specialty.

In this catalogue you will find a wide selection of instruments, including the original SuperCut scissor developed in 1984 and our Diamond SuperCut design. Quality goes into our STILLE

forceps, needle holders, clamps, rongeurs, curettes and retractors, as well as, a fine selection of stainless and titanium micro instruments. Common to all of our instruments is that they are smooth and consistently perform to your expectations. Our outstanding balance, solid design and ergonomics provides the surgeon with a reliable instrument throughout long and complex procedures.

We at STILLE are proud to have developed the world's first double-action bone rongeur. We also developed the world's first osteotome with the classic 8-sided handle. Many STILLE instruments have been copied, but a copy cannot measure up to the original.
