

**STILLE Scissors for  
Plastic Surgery**

## STILLE - Surgical Perfection

STILLE is one of the oldest medical device companies in the world. We develop, manufacture and sell proprietary high-quality surgical instruments and specialty tables to leading surgeons worldwide. We have done so for more than 170 years.

STILLE's offering consists of a strong brand and products renowned for their superior quality. We manage our business in two distinct business areas - Surgery and Patient Positioning.

STILLE surgical instruments are considered state of the art by many surgeons around the world. All STILLE instruments are handcrafted as an art by highly skilled instrument makers in Eskilstuna, Sweden.

The slender design and excellent balance are the characteristics which make the STILLE Instruments easily recognizable. Their highly polished surface and delicate design make STILLE instruments lighter and easier to keep clean, thus more durable against discoloration and corrosion. All this provides STILLE instruments with a unique and outstanding feeling.

**STILLE** scissors are well known for their delicacy and unsurpassed cutting ability. Once you try them, you will recognize the difference.

**"SCISSORS, PLEASE!"** Plastic surgeons worldwide prefer scissors from STILLE. They are light and well-balanced with a smooth, soft feel that follows every movement so that the scissors become a natural extension of the hand. The scissor's design provides a firm grip with maximum cutting power for all types of soft tissue. Regardless of the model they are perfectly precise – all the way to the tip.

Since STILLE invented the first SuperCut-scissors back in 1982, many have attempted to imitate the design. But after three decades no other brand can measure up to the handmade craftsmanship of the original SuperCut. One of the main features is the specially designed cutting surfaces. With one scissor blade and one knife blade the scissors cut smoothly and efficiently through soft tissue. A perfect cut. Every time!

## Original

Scissors have always been STILLE's bestseller ever since they were first produced in the 1800's. Through the years they have been continually improved and more special models have been introduced, many of them specially designed for plastic surgery.

Our original scissors are manufactured of the highest quality, polished stainless steel. They are well balanced with outstanding cutting power right down to the tips and they fit well in the surgeon's hand. There are original scissors for all types of soft tissue and they can also be used to cut gauze, wire and sutures.

## SuperCut

Many surgeons believe that the STILLE SuperCut are unsurpassed as the world's best surgical scissors. They are suitable for all types of soft tissue and the precision and performance are well known among plastic surgeons worldwide.

The revolutionary SuperCut scissors feature cutting surfaces that work together in a unique way. One blade is a scissor blade and the other is a knife blade to enable the scissors to cut precisely through the soft tissue. They provide maximum cutting power with minimal force and produce a perfect cut. The sharpening makes the scissors suitable for both right and left handed users. Despite many years on the market, other brands have not been able to create an imitation that can surpass the original SuperCut scissors.

## Ergonomic Scissors

A natural extension of the ongoing effort to create the perfect scissors has been the further development of their ergonomic properties. Surgical scissors are normally held in a precise grip using the thumb and middle or ring finger. For more time-consuming procedures this can cause the hand to become fatigued faster.

The solution is to angle the shanks so that the hand can work closer to its normal resting position. With a larger gap between the finger loops, tension and fatigue is countered and the hand can work more comfortably for a longer period. All ergonomic scissors are SuperCut models with their unique characteristics. Scissor and knife sharpened blades work together for maximum cutting power with minimal effort and exact precision.
